$\qquad$

# Distance, Speed, \& Time Flight Planning 

## A calculator is recommended for this activity.

Use data from the Specifications section of the information displays for each plane in this activity. The specifications data wil include maximum speed (fastest possible) and range (distance until it runs out of gas). Finish the math problem to find the actual speed, distance, or time, then check to make sure the aircraft can accomplish the trip as planned.

## Formulas

SPEED = distance / time DISTANCE $=$ speed $x$ time

TIME = distance / speed

## Doing the Calculations

If the problem asks for the speed, I'm going to do $\qquad$ divided by $\qquad$
If the problem asks for the distance, I'm going to do $\qquad$ times $\qquad$
If the problem asks for the time the trip will take, I'm going to do $\qquad$ divided by

## Stearman PT-17

Kevin is planning a trip in his biplane from Houston to Baton Rouge, LA, a distance of 256 miles. He plans to take 2 hours to get there. At what speed will he need to fly? $\qquad$ mph .
Check the data:
Can the plane handle flying at this speed? (Is it below the maximum speed of the plane?) $\qquad$ How much gas does he need? (Fuel burn: gallons per hour x number of hours in flight) $\qquad$ gallons

## Corsair F4U

Doug wants to take the Corsair to an air show in Honolulu, Hawaii. The trip would be 3927 miles, and he's running late so he will fly at the plane's maximum speed of $\qquad$ mph. How long will the trip take?
$\qquad$ hours.

## Check the data:

The range of a plane is the distance it can travel on one tank of gas, and for the Corsair this is $\qquad$ miles. Can Doug make this trip? $\qquad$ The folding wings are a clue that he could make the trip IF ... $\qquad$

## SNJ T6 Texan

Inge is excited to fly the T6 Texan for the first time and wants it to be a flight she'll never forget. She plans on going 200 mph for 3 hours. The Crew Chief has given her 100 gallon of fuel. What will be the total flight
distance? $\qquad$ miles.
Check the data:
Inge can handle it, but can the plane? Is she within the maximum speed ( $\square \mathrm{Y} \square \mathrm{N}$ ), range $(\square \mathrm{Y} \square \mathrm{N}$ ), and fuel needs ( $\square \mathrm{Y} \square \mathrm{N}$ ) for her flight?

## Sikorsky S-76A Helicopter

Lyle is flying the Sikorsky out to an oil rig in the Gulf of Mexico that is 375 miles away. He left Ellington Field at 8:00 am. If he flies at 150 miles an hour, what time should he arrive at the rig? $\qquad$
Check the data:
The flight is $\qquad$ hours. If he has a full tank of gas, will he make it? $\qquad$ How much gas will he burn? $\qquad$ gallons

## Douglas DC-3

Chris and Anna took a trip from Houston to Nashville in the DC-3. Nashville is 655 miles away and the trip took 4 hours. Did the plane fly at its maximum speed? $\qquad$ Check the data:
Trip speed = $\qquad$ mph Maximum speed $=$ $\qquad$ mph
This flight would require $\qquad$ gallons of fuel.
Is it within the maximum speed ( $\square \mathrm{Y} \square \mathrm{N}$ ), range $(\square \mathrm{Y} \square \mathrm{N}$ ), and fuel needs $(\square \mathrm{Y} \square \mathrm{N}$ ) for their flight?

## B-25 Mitchell

When the Doolittle Raiders left the USS Hornet in B-25 bombers to attack Japan, they were 650 miles away from the island. The flight took 6 hours. What was the average speed flown by the bombers? $\qquad$ mph Check the data:
After the air raid, most of the planes ended up crash landing because they ran out of fuel. The trip they flew is by far within the range the plane should be able to fly. Why do you think they crashed far less than full range of the plane?

## Distance, Speed, \& Time Flight Planning

## A calculator is recommended for this activity.

Use data from the Specifications section of the information displays for each plane in this activity. The specifications data wil include maximum speed (fastest possible) and range (distance until it runs out of gas). Finish the math problem to find the actual speed, distance, or time, then check to make

## Formulas

SPEED = distance / time
DISTANCE $=$ speed $x$ time
 sure the aircraft can accomplish the trip as planned.

## Doing the Calculations

If the problem asks for the speed, I'm going to do $\qquad$ divided by $\qquad$ time

If the problem asks for the distance, I'm going to do $\qquad$ times $\qquad$
If the problem asks for the time the trip will take, I'm going to do $\qquad$ e divided by
$\qquad$
speed

## Stearman PT-17

Kevin is planning a trip in his biplane from Houston to Baton Rouge, LA, a distance of 256 miles. He plans to take 2 hours to get there. At what speed will he need to fly? $\qquad$ 128 $\qquad$ mph .

## Check the data:

Can the plane handle flying at this speed? (Is it below the maximum speed of the plane?) $\qquad$ yes $\qquad$
How much gas does he need? (Fuel burn: gallons per hour x number of hours in flight) $\qquad$
$\qquad$ gallons

## Corsair F4U

Doug wants to take the Corsair to an air show in Honolulu, Hawaii. The trip would be 3927 miles, and he's running late so he will fly at the plane's maximum speed of $\qquad$ 462 $\qquad$ mph. How long will the trip take?
$\qquad$ 93.5 $\qquad$ hours.

## Check the data:

The range of a plane is the distance it can travel on one tank of gas, and for the Corsair this is 1120 $\qquad$ miles. Can Doug make this trip? _NO!_ The folding wings are a clue that he could make the trip IF ... $\qquad$

[^0]

## SNJ T6 Texan

Inge is excited to fly the T6 Texan for the first time and wants it to be a flight she'll never forget. She plans on going 200 mph for 3 hours. The Crew Chief has given her 100 gallon of fuel. What will be the total flight distance? _600_miles.

Check the data:
Inge can handle it, but can the plane? Is she within the maximum speed ( $\nabla \mathrm{Y} \square \mathrm{N}$ ), range $(\nabla \mathrm{Y} \square \mathrm{N})$, and fuel needs ( $\nabla \mathrm{Y} \square \mathrm{N}$ ) for her flight?

## Sikorsky S-76A Helicopter

Lyle is flying the Sikorsky out to an oil rig in the Gulf of Mexico that is 375 miles away. He left Ellington Field at 8:00 am. If he flies at 150 miles an hour, what time should he arrive at the rig? _ $10: 30 \mathrm{am}$ $\qquad$ Check the data: The flight is $\qquad$ 2.5 $\qquad$ hours. If he has a full tank of gas, will he make it? _yes $\qquad$ How much gas will he burn? _262.5_ gallons

## Douglas DC-3

Chris took a trip from Houston to Nashville in the DC-3. Nashville is 655 miles away and the trip took 4 hours. Did the plane fly at its maximum speed? $\qquad$ No $\qquad$
Check the data:
Trip speed = _ 164 $\qquad$ mph Maximum speed $=$ $\qquad$ 230 mph
This flight would require $\qquad$ 400 $\qquad$ gallons of fuel.
Is it within the maximum speed ( $\nabla \mathrm{Y} \square \mathrm{N})$, range $(\nabla \mathrm{Y} \square \mathrm{N})$, and fuel needs $(\nabla \mathrm{Y} \square \mathrm{N})$ for their flight?

## B-25 Mitchell

When the Doolittle Raiders left the USS Hornet in B-25 bombers to attack Japan, they were 650 miles away from the island. The flight took 6 hours. What was the average speed flown by the bombers? $\qquad$ 108 $\qquad$ mph Check the data:
After the air raid, most of the planes ended up crash landing because they ran out of fuel. The target was by far within the range the plane should be able to fly. Why do you think they crashed far less than full range of the plane?
The planes were loaded down with as many bombs as possible. More weight means more fuel must be
burned. Also, they were not just going to the target site, they had to try to make it to their landing sites
farwithing china.

TEKS 6.8c

[^0]:    he went most of the way on an aircraft carrier.
